Graphite Electrode (GE)

- A consumable for Electric Arc Furnaces (EAF) used in steel production
- Functions as an electrical conductor in EAFs, generating the heat required to melt steel scrap
- High-tech / High Entry Barrier – HEG was the last new entrant in the Western world in 1976
- EAF-produced steel emits one-fourth of the carbon compared to steel from traditional blast furnaces
- According to the World Steel Association, EAF steel production (w/o China) rose from 44% to 50% between 2015 and 2023 and 51% in 2024, while China's EAF production remains around 11%

- Has been World's Largest Single Site Graphite Electrode Plant under one roof with a capacity of 80,000 tons pa for a long time.
- Beginning 2024 completed expansion to 100,000 tons to become the third largest producer of Graphite electrodes in the western world. Now further expanding to 115,000 tons by early 2028.
- Except ours, no additional capacity announced by any other company in the western world.
- Exporting approx. 65 - 70% of its production to about 35 countries around the world consistently since more than 20 years.
- Diversified customer base - supplying large portion of production to top 20 steel companies of the world.
- Captive power generation capacity of around 80 mw (Two thermal power plants & One hydro power plant)

2025 decline reflects weak demand in China and developed economies; modest recovery expected in 2026 and stronger in 2027.

(2026) (2027)

2025 soft patch before a broader rebound in 2027.

Temporary slowdown, structural recovery ahead.

- **Global steel production mixed:** Q1 2026 at ~459 mmt, down ~2–3% YoY but up ~8% QoQ, with recovery largely **China-driven, not demand-led**.
- **China impact remains dominant:** Seasonal Q1 rebound after Q4 cuts; **exports >100 mmt annualized** continue to pressure global pricing and trade flows.
- **Ex-China demand subdued:** Production ~212 mmt, **flat QoQ**, indicating stable but weak underlying demand outside China.
- **India leads growth:** Strong infrastructure push driving ~5% QoQ growth; **US modestly positive**, while **Europe, Japan, Brazil** and other steel producing countries remain weak or flat.
- **Rising protectionism & regionalization:** Tariffs, anti-dumping and safeguard measures across the **US (Section 232), Canada, Mexico, India, Brazil, and the EU (quota regime)** reshaping global trade amid increased steel exports from China.
- **Europe structural shift (CBAM):** Carbon-linked import costs and upcoming quota regime to **favor low-emission (EAF-based) steel** and restrict imports.
- **Strong EAF capacity pipeline:** ~110 mmt additions by 2030 (20 mmt already added), driving **~200,000 tons incremental graphite electrode demand** (ex-China).
- **Ongoing geopolitical conflicts** are pushing up input costs, energy prices and ocean freights started putting pressure on margins which necessitating a price increase of graphite electrodes in coming quarters.
