Investor Presentation

Performance Highlights

Q3 of FY 25-26

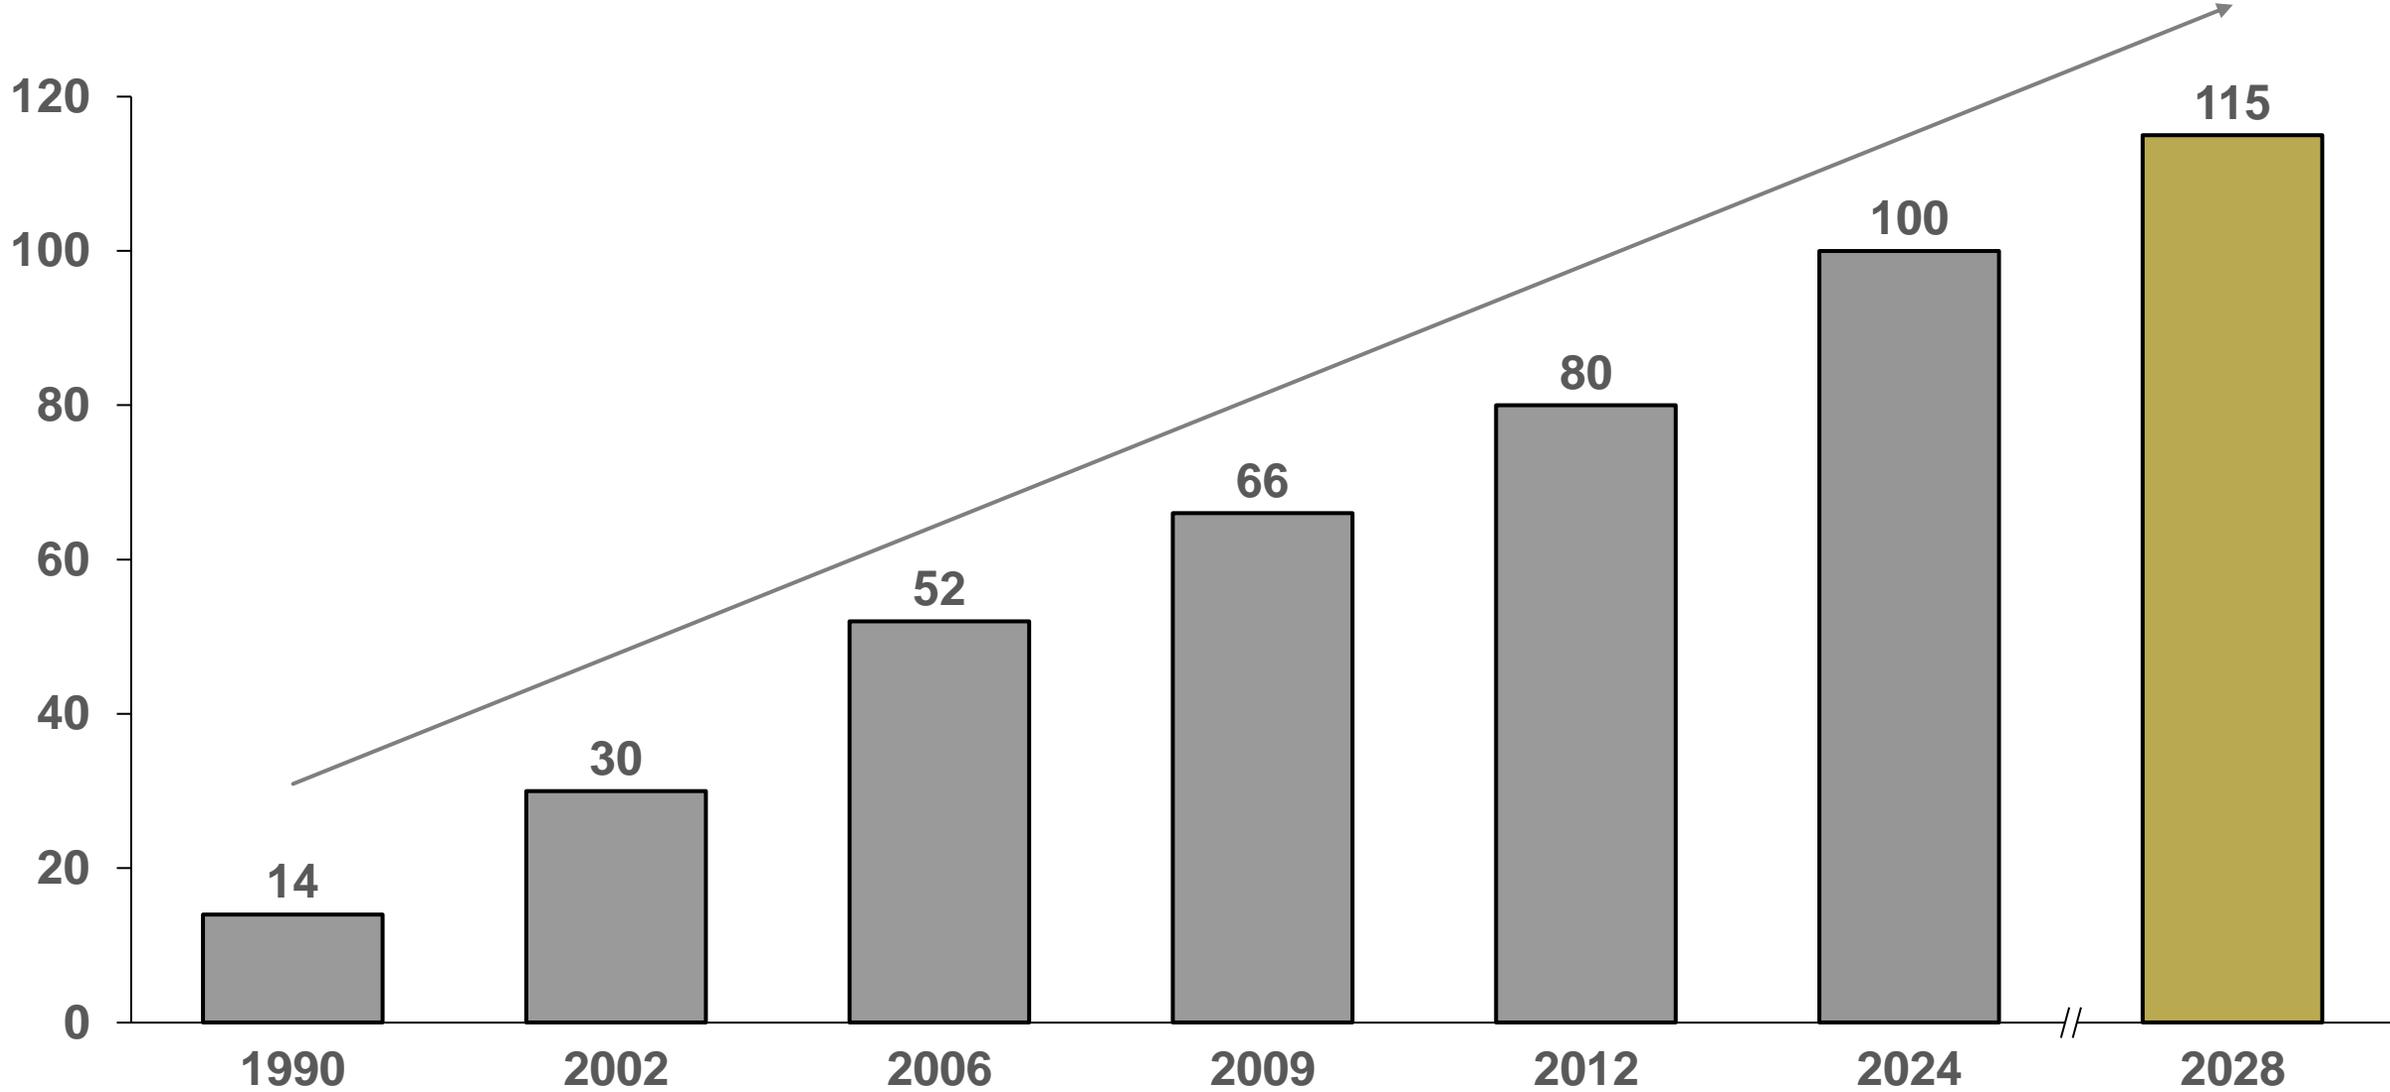

1. A consumable for Electric Arc Furnaces (EAF) used in steel production
2. Functions as an electrical conductor in EAFs, generating the heat required to melt steel scrap
3. High-tech / High Entry Barrier – HEG was the last new entrant in the Western world in 1976
4. EAF-produced steel emits one-fourth of the carbon compared to steel from traditional blast furnaces
5. According to the World Steel Association, EAF steel production (w/o China) rose from 44% to 50% between 2015 and 2023 and 51% in 2024, while China's EAF production remains around 11%

- 1. Has been World's Largest Single Site Graphite Electrode Plant under one roof with a capacity of 80,000 tons pa for a long time.**
- 2. Since Nov'23, capacity expanded to 100,000 tons to become the third largest producer of Graphite electrodes in the western world.**
- 3. Except ours, no additional capacity announced by any other company in the western world.**
- 4. Exporting approx. 65 - 70% of its production to about 35 countries around the world consistently since more than 20 years**
- 5. Diversified customer base - supplying large portion of production to top 20 steel companies of the world**
- 6. Captive power generation capacity of around 80 mw (Two thermal power plants & One hydro power plant)**
- 7. Announced expansion of another 15,000 tons to reach a capacity of 1,15,000 tons by end of 2027**

Source: World Steel Association. Estimates are subject to revision in the next update. The table above represents 71 countries,

- **Global crude steel production under pressure:** Full-year **CY-2025 fell ~2.0% YoY**, reflecting weak end-use demand across major markets.
- **China drove the downturn** with output declined **~4.4% YoY to 960.8 mmt**, while **record steel exports (~119 mmt)** displaced domestic weakness and increased global supply pressure.
- **World ex-China** production grew **~0.8% YoY**, with **growth driven primarily by India and the US**, while most other regions remained flat or declined
- **India remains the growth engine** with crude steel production increased **~10.4% YoY to ~165 mmt**, making it the **only major market delivering sustained supply growth**.
- **Regional divergence (CY-2025):** **India (+10.4% YoY)**, the **US (+3% YoY)** and **Turkey (moderate growth)** were the only major markets to post production growth, supported by infrastructure spending, manufacturing activity and capacity utilization, while **most other regions were flat or lower**.
- The ongoing **US tariffs** continue to redirect trade flows, intensifying competition in unprotected markets.
- Short-term market pressure continues as weak global production weighs on graphite electrode demand, with cautious customer purchasing keeping spot prices under pressure.
- Our confidence remains grounded in the continued shift toward electric arc furnace (EAF) steelmaking outside China, which supports a durable growth trajectory for graphite electrode demand well into the next decade.
