News Release

GE T&D India Limited announces Second Quarter 2016/17 results

New Delhi, India — Nov 11, 2016 — GE T&D India Limited, formerly ALSTOM T&D India Limited, reported on November 10, 2016 its financial results for the second quarter ended September 2016, following approval by the company's Board of Directors.

The company continues to maintain a healthy backlog of 82.7 BINR by winning 12.5 BINR orders during the quarter, which increased by 66% as compared to the second quarter 2015/16. Sales revenue was 8.8 BINR, down by 4% versus the same period last year and Profit After Tax was 0.2 BINR.

The company won a number of major orders during the quarter from central, state utilities and private developers. Notable among them are the contracts from Sterlite Grid for 400 kV GIS substations and 765 kV AIS substations from Powergrid. It also secured 400 kV series reactor package at Ballabgarh and Mandola from Powergrid. The company continues to maintain its market leadership position.

The company also achieved a significant milestone with the commencement of India's first 'Make in India' 765 kV GIS dedicated manufacturing line at Chennai. The dedicated line will cater to the growing demand of 765kV GIS in India and abroad. The company has installed 755 GIS Bays, the largest in India. Since inception of its Chennai facility in 2009, it has produced over 450 GIS Bays till date - highest number in India by any GIS manufacturer. It also successfully commissioned 765 kV AIS substations at Phagi and Bhiwani for Power Grid and 132 kV GIS at Rawanbhatta for CSPTCL.

Rathin Basu, Managing Director of GE T&D India, said, "Despite a challenging quarter given the investment environment, we achieved a strong order booking to add to our healthy backlog and are focused on driving execution and commissioning. Adding to our Make in India initiative we achieved another major milestone of manufacturing the first 765kV GIS Breaker at our Paddapai facility."

About GE

GE (NYSE: GE) is the world's Digital Industrial Company, transforming industry with software-defined machines and solutions that are connected, responsive and predictive. GE is organized around a global exchange of knowledge, the "GE Store," through which each business shares and accesses the same technology, markets, structure and intellect.
