Q3FY26 & 9MFY26 Highlights

SUCHETH DAVULURI

“The revenues this quarter are in line with the outlook we envisaged for the year, however the product mix within businesses as well as increased operating expenses is reflected in subdued EBITDA margins. We continue to see good momentum in the business which is driving our investments with the long-term in view, ensuring Neuland can take advantage of the number of growth opportunities”

SAHARSH DAVULURI

“We are seeing increasing interest from a wider range of customers interested in our capabilities as a proven commercial NCE drug substance manufacturer as well as an integral partner in the innovation journey. Our investments are leading to more engagements with existing customers while also attracting new customers who are looking for specific niche capabilities.”

Q3 & 9M FY26 Business Overview

CMS

CMS revenues driven by commercial molecules.

Growth in new projects orders which will be delivered over the course of the next few quarters.

Traction from Innovators with peptides molecules in pipeline.

GDS

In Prime segment Ezetimibe, and Mirtazapine were the key molecules. Ezetimibe likely to drive growth of the Prime segment.

Specialty business subdued due to Paliperidone, revenue driven by Apixaban and Dorzolamide.

Financial Highlights

Working capital days of sale at 145 days in Q3FY26 as against 155 days in Q2FY26, mainly on account of decrease in receivables.

Board Approval for R&D to move to leased facility of 140k Sq feet at Genome Valley.

Capex outflow of Rs. 254 Cr in 9MFY26.

- Pre-clinical to P-3: Neuland generates revenue by process research & development as well manufacturing quantities for clinical trials
- *Pre-Reg/Reg: Phase-3 complete; Molecules filed but not yet commercial or where customer working towards adding Neuland as a second source for a commercial molecule
- Commercial: Neuland generates revenues by manufacturing APIs for commercial novel molecules for innovators
- Steady trend in molecules transitioning from clinical phases to commercialisation resulting in increase in revenue from commercial products

- FY25 revenues showed a slight decline due to the natural lifecycle of projects in the CMS business. The decline in revenues impacted other financial metrics as a result of the deleverage
- Revenue was impacted in FY2018 as a result of mismatch in capacity vs orders. EBITDA margins in FY19 & FY20 were impacted as a result of spike in RM prices, which led Neuland to actively work towards Supply chain de-risking before the COVID19 pandemic
- ROCE was impacted by due to acquisition of unit III in FY2018 which was commercialized in FY2021. Unit 3 utilisation levels have recently started ramping up and momentum is expected to continue

Business Strategy

Neuland Strategy Framework

Our Businesses

Generic APIs (GDS)

- We are a preferred service provider in the manufacturing of Active Pharmaceutical Ingredients (APIs)
- Have developed processes for over 100 APIs with a strong portfolio of complex molecules
- **Process Investigation Department (PID)** majorly helps our customers to meet their price pressures by way of cutting their total cost of ownership in developing an API thereby achieving excellence in Process development
- API manufacturing heritage of over 40 years
- Flexible 100g to hundreds of tons capacity
- Non-competitive advantage (does not compete in finished formulation)
- Worldwide customer base in 80+ countries
- Proven project management systems
- Impeccable EHS record

**Facilities &
Capacity**

Three US FDA and
cGMP compliant
manufacturing facilities

100 APIs across 10

Global peptide API market is poised to reach \$14Bn by 2030.

Key market drivers

Peptide API market to scale by ~\$14 bn by 2030 driven mainly by rich peptide pipeline and increasing demand for GLP-1.

2/3rd of peptides in clinical pipeline are being developed by synthetic routes.

Patent cliff of peptides, broadening the availability of these drugs as volume increases expected to offset price declines

Glossary

Term	Description
Active Pharmaceutical Ingredient (API)	Any substance that is intended for incorporation into a finished drug product and is intended to furnish pharmacological activity or other direct effect in the diagnosis, cure, mitigation, treatment, or prevention of disease, or to affect the structure or any function of the body
Biologic	Biologics can be composed of sugars, proteins, or nucleic acids or complex combinations of these substances, or may be living entities such as cells and tissues.
Commercial molecules	Molecules where Neuland is manufacturing for commercial use after the product has been approved
Custom Manufacturing Solutions (CMS)/ Contract Development and Manufacturing Organization (CDMO)	Develop and manufacture pharmaceutical ingredients and intermediates in line with customer expectations.
Development Molecules	Projects where Phase-3 is over, and molecules have been filed but not yet commercial.
DMF	A Drug Master File (DMF) is a submission to the Food and Drug Administration (FDA) that may be used to provide confidential detailed information about facilities, processes, or articles used in the manufacturing, processing, packaging, and storing of one or more human drugs
GDS	Generic Drug Substance (GDS) segment which includes Prime products and Specialty products
International Council for Harmonisation (ICH) Guidelines	Harmonisation project involving regulatory authorities and pharmaceutical industry to improve efficiency of new drug development and registration processes
New Chemical Entity (NCE)	NCE is granted to “a drug that contains no active moiety that has been approved by FDA in any other application”
Peptides	Peptides are sequences of molecules called amino acids. Peptides of precise sequences may occur naturally in the body, but they may also be produced synthetically or using recombinant DNA technology in bacteria and other living systems. These molecules are used to treat a variety of diseases

Term	Description
Pipeline drugs	Drugs (small or large molecule) under development by a manufacturer
Prime APIs	The prime products which typically include mature APIs with relatively higher competition in API space have historically contributed more than 70% of the total business.
Specialty/ Niche APIs	Molecules in the API space which are complex in nature and are in the nature of ‘high value’ added products and Neuland’s focus has been to develop these molecules from laboratory scale to large commercial quantities
Preclinical study	Preclinical studies take place in animals before any testing in humans is done.
Phase I clinical trial	Researchers test an experimental drug or treatment in a small group of people for the first time.
Phase II clinical trial	The experimental drug or treatment is given to a larger group of people to see if it is effective and to further evaluate its safety.
Phase III clinical trial	The experimental study drug or treatment is given to large groups of people. Researchers confirm its effectiveness, monitor side effects, compare it to commonly used treatments, and collect information that will allow the experimental drug or treatment to be used safely.
Small molecule products	A drug that can enter cells easily because it has a low molecular weight. Once inside the cells, it can affect other molecules, such as proteins, and may cause cancer cells to die. This is different from drugs that have a large molecular weight, which keeps them from getting inside cells easily. Many targeted therapies are small-molecule drugs
USFDA	The US Food and Drug Administration is responsible for protecting the public health by ensuring the safety, efficacy, and security of drugs, biological products, and medical devices
