AUDITORS' REPORT:

The Observations made in the Auditors' Report read with relevant notes No. 2(F) in Notes to Accounts, call for comments under Section 217(3) of the Companies Act, 1956 regarding "not made provision for Long Term Employee Benefits". The Board is of the opinion that the Provision for the Long term Employees are determined on the basis of actuarial Valuation Method & technique prescribed in the Accounting Standard. The Consulting fees by actuaries for determining the Provision for long term benefit Plan is even higher than the Annual Liability of the company for Long term benefits. The company has decided to pay the Long term benefits as and when it becomes due as the amount is negligible and it is not going to make any impact on the financial Position of the company. Considering the size of the company and negligible liability, the company has not made provisions for Long term employee benefits & Defined benefits plan.

The Matter of Emphasis made in the Auditor's Report in respect of Note No. 37 in respect of "Change in Accounting Policy" relating to accounting Treatment of foreign exchange fluctuation in respect of long term Monetary liabilities of the company has been added to cost of Depreciable Assets . The Board is of the opinion that The Change in Accounting Policy in respect of accounting of gain or loss arising on account of foreign exchange Fluctuation in respect of Long term Assets or Liabilities has been adopted by the board due to lot of fluctuations in Foreign Exchange Rates. Also, the Foreign Exchange liability standing on the books is for Import of Capital Asset and hence it has been capitalized.

TEXTILE BUSINESS

1. INDIAN TEXTILE INDUSTRY STRUCTURE & DEVEOLPMENT

(Textile Products viz Texturised Yarn, Grey Cloth & Finished Fabric)

Textile industry plays a significant role in determining the economic development of a country in terms of not just net foreign exchange earnings but also via direct and indirect employment generation. The industry contributes around 4% to the gross domestic product (GDP), around 18% to the country's export earnings and nearly 14% to industrial production, besides providing direct employment to 35 million and indirect employment to 45 million people. The textile sector is the second largest provider of employment after agriculture in India.

Globally, India has the 2nd largest textile manufacturing capacity, in terms of spindles and looms. India is the 4th largest exporter of textiles & clothing products to the world, with a share of 4.4% in the global trade. Over last 10 years, exports of textiles & clothing products from India have grown at more than 11% p.a., which increased the share in global trade from 3% to 4.4% between 2003 and 2012.

Indian textiles industry has a strong presence across the value chain. The fundamental strength of this industry flows from its strong production base of wide range of fibers / yarns from natural fibers like cotton, jute, silk and wool to synthetic /man-made fibers like polyester, viscose, nylon and acrylic. Globally, India is the largest producer of Jute fiber, and 2nd largest producer of cotton, silk, cellulosic and synthetic fibers.

The India has potential to increase its textile and apparel share in the world trade from level of 4.5 percent and reach US\$ 80 billion by 2020.

2. EXPORT SCENARIO

India ranks second in global textile exports. According to new data from the Apparel Export Promotion Council (APEC), India's textile exports were valued at over US\$40 billion in 2013. India's share of global textile trade increased by close to 18 percent in 2013 from the previous year, enabling it to capture a significant portion of the global textile market, which is estimated to have grown by 6 percent last year.

This growth is phenomenal as the global textiles growth rate is only 4.7% compared to India as it has registered the growth of 23% beating China and Bangladesh which has registered 11.4% and 15.4%, respectively. Increasing labour cost in China, non-compliance of large number of factories in Bangladesh provide India a big opportunity in view of its relative advantage, risk appetite of Indian entrepreneurs and a small push from the Government may help India to get more business as overseas buyers are looking at India as safe and reliable option for the sourcing. But to capture the space in market left by China and Bangladesh, we have to be competitive in pricing, apart from meeting strict timelines, better quality delivery by Indian exporters and therefore, Government agencies active support is very crucial.

3. OPPORTUNITY & THREATS

Opportunities

- Emergence of retail Industry as a whole and development of various malls provide huge opportunities for the apparel segments
- Opportunities in product diversification (for e.g., Technical Textiles)

- Change in consumption pattern, including rising demand for high quality premium fabrics and development of various products cater to global needs
- Reduction of Duty on Man-made Fiber likely to kick Indian textile Industry
- Increasing Production Cost in China Given a window of Opportunity to Textile Sector

Threats

- Increasing apparel import from China and impact of global economic slowdown
- Rising input costs, Borrowing Cost
- Volatility In Exchange rate
- Global Crisis in countries like Iraq, Israel, etc leading to volatility in Crude Oil prices is a concern to the entire Textile Industry

4. RISK AND CONCERN

- High Financing Cost
- High Fragmented Industry with large number of small-Size and technologically outdated plants,
- lacking benefits of economies of Scale, Inadequate supply of skilled labour
- Lack of Trained Manpower and low labour Productivity due to lack of Technological Development
- High Labour cost and Energy cost are matter of Concern

AAC (AUTO-CLAVE AERATED CONCRETE) BLOCKS BUSINESS

1. INDUSTRY STRUCTURE & DEVELOPMENT

Indian construction industry is one of the most important sectors of the economy as it stimulates building infrastructure and creates growth opportunities for other sectors in the economy. Going forward, the construction industry in India is poised for substantial growth in the future years, In spite of the temporary setback last year.

The building materials sector in India is a key constituent of the country's construction industry. Driven by recent growth in the infrastructure and the construction industry, the building material sector has recorded considerable growth over the last few years. Furthermore, India's economic performance and rapid increase in per capital income signal excellent growth prospects for this sector.

Economic growth and demand for building materials always move hand-in-glove given the intricate correlation between GDP growth and the level of construction activities. Strong economic growth, expanding population, industrialization, and urbanization results in increased infrastructure and housing needs thus translating into improved construction activities across all sectors - residential, commercial and infrastructure.

Environmental conservation has also become a key focus area, as buildings account for about 35-40% of energy consumption and also account for about a third of the global greenhouse gas emissions. Growing emphasis on sustainability is thus expected to spur demand for green building materials Like Auto Clave Aerated blocks

AAC INDUSTRY IN INDIA "AN ECOFRIENDLY INITIATIVE FOR THE CONSTRUCTION INDUSTRY"

Autoclaved Aerated Concrete AAC blocks manufacturing is a growing industry in India. AAC is a Swedish product and promises to bring drastic changes to construction industry in India. AAC has superior performance and offers advantages over Red bricks. AAC blocks offer interesting options for construction industry. The first Aerated Autoclaved Blocks were conceptualized and invented by Swedish architect and inventor, Johan Axel Eriksson in the mid 1920's. This fire resistant building material gained popularity much later and once it began to be recognized, there was no looking back. Later in 1940's, these blocks gained ground. In India, however, it is still in the developing years and there are few recognized companies like us, at Mohit (NXT BLOC) India. Use of Autoclaved Aerated Concrete (AAC) blocks in construction industry in India offers interesting proposition for various segments in the society. For a project developer it means faster and lower cost construction. For environmentally conscious it means eco-friendly products and for those who occupy buildings built with AAC blocks it means better safety and lower energy costs for cooling or heating.

AAC became much popular gradually all over the world. Now AAC is one of the most ideal and environment friendly building materials.

Shelter is third skin, according to a German Concept, which implies its importance next to human Skin and Clothing. This also shows the attachment of human race to this fundamental requirement. Building Material accounts for major component of the construction cost. Depending on the location they can contribute to 60 - 70 % of the cost of construction. With the ever increasing population, the demand for housing increases. This directly creates demand for this prime commodity of building. Add to the above fact the nearby area of this project site is undergoing a major infrastructure revolution. As Residential, Commercial, IT companies, and Industrial establishments are coming in, we can conclude that the Blocks unit will prosper and flourish in this environment. There is a central government gadget notification mandating government departments and CPWD to use 100% Fly Ash based Bricks in their all constructions directly or through contractors. This factor will help the marketability of this product immensely. Fly Ash policy of the Government also mandates that 20% of Fly ash Generated by a power plant must be given free of cost to SME sector on a priority basis. In INDIA, according to market analysis, currently AAC Blocks manufacturer only produce 20% production as actually demanded in market. They would be highly Demandable in near future.

The Government's continued support, focus and encouragement for using green building products has given an additional impetus to the growth of the building material industry. With increasing awareness and acceptance for usage of green building products, market for AAC blocks is expected to grow multi-fold in the years to come.

2. OPPORTUNITY & STRENGTH

- Abundance raw material like Lime, Fly Ash, gypsum, Aluminum Powder
- Reduction of GHG Emission or Earning of Carbon Credit
- High Demand in Future as Green product
- Conserves natural resources and decreases air pollution as well as Earthquake Resistance
- Use of Fly ash – Industrial Waste- as an ingredient of building material and No Generation of Waste in atmosphere.
- Better Quality employment creation and Reduction of Dependence on fossil fuels

3. RISK AND CONCERN

- High transportation Cost
- Scarcity of trained and experienced manpower
- Understanding of various equipments, communications and awareness about local laws, documentation and compliances
- Lack of latest technology or Machineries needed to be import from China.
- Insufficient Supply of Labour Force
- High Finance Cost and Investment cost
- Substantial Gap between Demand & supply of Coal
- Lack of entry barrier attracting new entrant into line of business

4. BUSINESS OUTLOOK

Your Company has installed autoclaved aerated concrete (AAC) blocks manufacturing unit of capacity 300,000 m³/annum in Umargaon, Gujarat. Your Company's AAC Blocks are marketing in Brand Name of "NXTBLOC". The market Characteristic shows the demand for AAC Blocks as green product increase due to its various advantages like natural lightweight, earthquake and fire resistance attracts more customers in future. Company use waste material fly ash generated from thermal power plants as the primary raw material for manufacturing AAC Blocks. Production of AAC blocks will replace conventional fired (baked) clay bricks as construction material. The energy requirement for fired clay bricks manufactured in India is supplied predominantly by high carbon intensive fossil fuel sources. AAC blocks are manufactured by the autoclaving process, which is less energy intensive as compared to the thermal baking process used for manufacturing of fired clay bricks results in lower greenhouse gas emission as compared to the conventional clay bricks manufacturing process. Reductions of GHG emission provide earning of Carbon Credit in future. Your Company has already proceeds steps to register company's AAC project Activity with APX- VCS (Verified Carbon Standard) Registry for issuance of VER's.

The company is providing for gratuity on due basis and not on accrual basis as required by Accounting Standards The amount of fees charged by actuaries for determining the valuation and assessment of the amount Payable for such long term benefit is even higher than the Annual Liability of the company for Long term benefits, if any arises during the year. Hence, it is not prudent to put cost on the company for accrual of an expense which is less. Considering the Financial Prudence and un-substantial amount involved, the company decided to pay the Long term benefits as and when it becomes due and it is not going to make any impact on the financial Position of the company. Considering the size of the company and negligible liability, the company has not made provisions for Long term employee benefits & Defined benefits plan.</p>
